North Wind, Inc. is an aggressive; 8(a), woman-owned, small disadvantaged business of over 340 experienced personnel in 17 offices nationwide. Our Anchorage office is incorporated, has been self-supporting since 1999 and offers a full range of environmental remediation services supported by knowledgeable personnel with extensive experience working in the State of Alaska.

Construction Division:

North Wind's Construction personnel have worked on many federal and federally funded projects over the past 7 years.

- ✓ Wetland Construction
- ✓ Reclamation and closure plans
- ✓ Contaminated soil removal, treatment, and disposal
- ✓ Mine Closure
- ✓ Construction and Construction management
- ✓ Heavy Civil / earthwork grading
- ✓ Decontamination and Demolition (D&D)

North Wind's Anchorage office has conducted more than 70 projects and \$9.5M in environmental services for governmental agencies and private clients within the State of Alaska. Our Anchorage staff is comprised of 5 highly qualified professionals who have extensive experience conducting hazardous, toxic, and radioactive waste (HTRW)-type work and work closely with federal, state, and local regulating agencies including the EPA Region 10 and the Alaska Department of Environmental Conservation. This strong local presence brings an invaluable understanding of working in the State of Alaska, including the physical and logistical challenges that come with working in remote locations under extreme weather conditions.

Direct Push and Hollow Stem Auger Services:

- ◆ **ENVIRONMENTAL and GEOTECHNICAL SOIL SAMPLING**
 - ✓ Continuous or discrete soil samples
 - ✓ Rapid collection of soil samples
 - ✓ Minimal site impact
 - ✓ No soil cuttings generated!
- ◆ **GROUNDWATER SAMPLING and REMEDIATION**
 - ✓ Temporary groundwater monitoring points
 - ✓ Permanent groundwater monitoring wells (up to 3" ID)
 - ✓ Air sparge points
 - ✓ Lysimeter, tensiometer, and other vadose zone instrument installation
- ◆ **SOIL GAS SAMPLING and REMEDIATION**
 - ✓ Temporary or permanent soil gas sampling points
 - ✓ Soil Vapor Extraction
- ◆ **POWER PROBE ADVANTAGES**
 - ✓ Air transportable to remote locations
 - ✓ Faster and more cost effective than traditional drilling methods
 - ✓ Minimal waste generation
 - ✓ Flexible range of sample intervals
 - ✓ Easier access to areas of limited overhead clearance
 - ✓ Auger or probe under structures or USTs

The benefits North Wind brings to its Alaska Clients include:

- ◆ Established Alaska office with over ten years of extensive experience in HTRW work in the State of Alaska
- ◆ Highly qualified local engineers and scientists that provide fielded, cost effective solutions
- ◆ Experience using local resources, including personnel, equipment, and subcontractors
- ◆ Cradle-to-grave remediation services
- ◆ Award-winning innovative remediation technologies
- ◆ Proven project management experience resulting in continued funding and follow-on work
- ◆ Proven track record of working cooperatively with regulatory agencies
- ◆ Commitment to implementing sustainable design practices and a philosophy that embraces environmental stewardship and recycling.

North Wind has the technical depth and sophistication to deliver quality, professional services. We match our technical expertise with proven management capabilities to provide quality, responsive field services. North Wind provides cutting edge technical services unmatched by our 8(a) competitors—with fielded and proven innovative approaches such as enhanced in-situ bioremediation and monitored natural attenuation. We also have an established history of successful and cooperative working relationships with state and federal agencies—which translates into earlier closures, cost reductions, and/or time savings.
