

Hannah Willard, a lifelong Alaskan, is Assistant Director of Renewable Energy Alaska Project (REAP) and has been involved with the organization since its inception in 2004. Ms. Willard has also worked with the Alaska Energy Authority in the Alternative Energy and Energy Efficiency Division, traveling across Alaska installing meteorological towers through their Anemometer Loan Program. In 2005, Ms. Willard received her undergraduate degree from UAA in management along with minors in environmental studies and economics. She is currently managing REAP's Denali Green Tag program, a voluntary carbon offset that benefits both Alaska's renewable energy producers and future development of renewable energy across the state.
